Below this, a green navigation bar contains three sections: "What are Animaps?", "How does it work?", and "Examples".

**What are Animaps?**  
Animaps extends the My Maps feature of Google Maps by letting you create maps with markers that move, images and text that pop up on cue, and lines and shapes that change over time.  
When you send your Animap to friends it appears like a video - they can play, pause, slow and speed up the action!

**How does it work?**  
1. Check out the examples to see the sorts of cool stuff you can do.  
2. Watch the following quick tutorial.  
3. Click on Get Started and sign in using your Facebook account, or register an account with us.  
4. Once you've got the hang of it, see these more advanced tutorials to hone your animated map making skills!

**Examples**  
A good overview of what Animaps can do.  
Two people and their trips across Asia and Europe, showing the use of animated markers with lots of image popups.  
Shows how multiple TCX (or other routing) files can be imported and combined
